PROFILE SUMMARY

Motivated Computer Engineering student with a strong foundation in technical concepts and a passion for Creative Design. Proficient in leveraging Generative AI tools and Canva to create high-impact user interfaces, social media templates, and digital assets. Proven ability to apply engineering logic to digital branding and project management, as demonstrated through live client work. Seeking an entry-level creative or technical role to deliver smart, optimized, and modern visual solutions for progressive brands.

EDUCATION

Bachelor of Technology in Computer Engineering **2023 - 2027 (Expected)**

Gandhinagar University

Acquiring academic knowledge in data structures, algorithms, databases, and software engineering. Applying analytical logic to front-end wireframing layouts.

Class XII (Science) **2023**

Super English School, Ranip

Grade: 48.86%

Class X **2021**

Super English School, Ranip

Grade: 83.23%

SKILLS OVERVIEW

Technical & AI Skills

Generative AI, Prompt Engineering, Prompt Architectures, Digital Branding, Visual Design

AI Dev & Tech Familiarity

AI-Driven Code Assembly, Generative Component Integration, HTML5 Structural Layouts, Tailwind CSS Frameworks

Web Design & UI/UX

Web User Interface (UI) Design, Wireframing, Prototyping, Responsive Layout Design, Typography Hierarchy

Soft Skills

Analytical Problem Solving, Social Media Management, Fast Learner, Highly Adaptable, Client Communication

PROJECTS

Cross-Border E-Commerce Platform UI/UX Project ↗

2024

Interactive Layout Portfolio Piece

- Developed a dynamic, conversion-focused user interface (UI) layout specifically engineered for global supply chain and trading businesses.
- Created interactive components and wireframes highlighting key business operations like product shipping, global sourcing, and client lead capture.
- Maintained clean brand aesthetics, professional typography, and strict design guidelines matching AAA text accessibility standards.

AI Prompt Engineering Benchmark Simulator ↗

2024

Technologies: HTML5, Tailwind CSS, Vanilla JS, Prompt Systems

- Comparative UI Architecture: Developed a responsive 3-page split-screen web application specifically designed to visually benchmark the output quality of standard user prompts versus optimized prompt engineering.
- Multi-Domain Simulation: Engineered dual-pane visual layouts for three live use cases (Global Trade Portal, Premium Branding, and Live Analytics Data), demonstrating how structured prompt frameworks solve creative limitations.
- Interactive Design Systems: Implemented fluid frontend transitions and animations to showcase the direct impact of precise instructions and constraints on Generative AI outputs.

PROFESSIONAL EXPERIENCE

Freelance UI/UX & Digital Brand Designer

2023 - Present

Remote Client Engagements

- Collaborated with businesses to establish unified visual brand standards and responsive visual templates.
- Designed modern digital assets and templates using Canva, boosting client social media engagement by 35%.
- Utilized Generative AI tools to synthetically construct distinct graphical components, reducing project times.
